SUMMARY

Data Analyst with experience translating complex datasets into clear, actionable insights for cross-functional business stakeholders. Processed 5M+ financial transactions at Ernst & Young, ensuring 99% data quality for Fortune 500 clients. Skilled in SQL, Python, and dashboard development with a track record of automating reporting workflows, identifying usage trends, and communicating findings to both technical and non-technical audiences.

EDUCATION

Northeastern University, Boston, MA | Master of Science in Information Systems | CGPA : 3.6 , 09/2023 - 12/2025

Coursework: Generative AI, Neural Modelling, Deep Learning, Data Science Engineering, Algorithms

SVKM's MPSTME, Mumbai, India | Bachelor of Technology in Computer Engineering with Honours in AI/ML, 08/2017 - 07/2021

INTERESTS & SKILLS

Interests: Data Analytics, Business Intelligence, Reporting Automation, Usage Trend Analysis, Content Analytics, Stakeholder Reporting, Dashboard Development

Languages: Python (Advanced), SQL (Advanced), R, JavaScript, Shell Scripting

Analytics & BI: Pandas, NumPy, Matplotlib, Seaborn, Tableau, Excel (Advanced), ETL Pipelines, Data Mining, Data Modeling, Exploratory Data Analysis, A/B Testing

Databases & Tools: PostgreSQL, MySQL, MongoDB, BigQuery, Git/GitHub, REST APIs, Docker, AWS (S3, Lambda)

PROFESSIONAL EXPERIENCE

HyperAnalytics - AI Engineer

06/2025 - 09/2025

- **General Role:** Delivered data analysis and performance reporting for clinical stakeholders - analyzing healthcare usage trends, maintaining production dashboards, and enforcing data quality processes across analytics pipelines.
- **Dashboard & Performance Reporting:** Built metrics dashboard tracking accuracy, precision, recall, F1-score, and business KPIs - provided ongoing reporting and ad-hoc analysis for clinical and operational stakeholders on 10,000+ healthcare records.
- **Data Quality & Process Enforcement:** Applied statistical techniques to extract structured data from unformatted medical documents - enforced validation processes ensuring consistent, accurate results; improved data processing efficiency by 70%.

Humanitarians AI - AI Engineer

01/2025 - 04/2025

- **General Role:** Built analytics pipelines and automated reporting workflows - analyzing usage data across 100,000+ records and identifying trends to support operational decision-making.
- **Analytics & Automation:** Developed automated data pipelines and analytics system for customer behavior analysis - achieved 92% retrieval accuracy on 100,000+ records with sub-second query performance; identified efficiency opportunities reducing costs by \$50K annually.

Future Focused Education - AI & Database Engineer

06/2024 - 08/2024

- **Usage Analytics & Reporting:** Implemented learning analytics tracking user engagement and content usage trends - analyzed patterns to improve content relevance by 60% for 500+ concurrent users; designed database architecture supporting 99.9% uptime.

Ernst & Young - Senior Analyst in Technology Consulting Risk

12/2021 - 02/2023

- **General Role:** Delivered data analysis and reporting for Fortune 500 clients - writing complex SQL queries, automating reporting workflows, identifying trends in large transactional datasets, and communicating findings to senior non-technical stakeholders.
- **SQL & Data Analysis at Scale:** Wrote advanced SQL queries using CTEs, window functions, and aggregations to analyze 5M+ financial transactions - identified anomalies and usage patterns, ensuring 99% data quality across enterprise systems.
- **Reporting Automation:** Developed Python automation pipelines replacing manual reporting workflows - reduced analyst effort by 65% and saved 200+ hours monthly; produced executive-level written summaries and presentations for cross-functional business teams.
- **Predictive Modeling:** Built regression and classification models (Random Forest, XGBoost) achieving 85% accuracy on financial risk assessment - translated model outputs into clear recommendations for non-technical stakeholders, reducing processing time by 70%.

PROJECTS

NewsGT - News Aggregation & Intelligence Platform

01/2026 - Present

- Built structured data extraction pipeline processing 100s of global sources across 9 domains and 65 languages - applied 5W1H analysis and 5-signal bias scoring to produce confidence-labeled analytical outputs with financial context from FRED, yfinance, and IMF.

Medical Image-to-Report Generation System

08/2025 - 12/2025

- Processed 7,400+ image-report pairs through custom data pipeline with vocabulary construction of 1,500+ medical terms - reduced report generation from 15 minutes to under 300ms; benchmarked outputs achieving BLEU-4 of 0.15, ROUGE-L of 0.31.

3D Perception Research for Autonomous Vehicles

09/2024 - 12/2024

- Implemented PointNet++ deep learning architecture in PyTorch for real-time 3D object detection on LiDAR datasets - optimized data processing pipeline achieving 85%+ detection accuracy at 10 FPS real-time throughput through geometric feature engineering and DBSCAN clustering.

HONORS AND CERTIFICATIONS

- Honours in Artificial Intelligence & Machine Learning - SVKM's MPSTME (A+ Grade)
- Google Cloud: Prompt Design in Vertex AI | Generative AI Fundamentals | Large Language Models | Responsible AI
- Kaggle: Deep Learning | Machine Learning
